

# Key behaviours that support regenerative grazing

1. Actively and regularly communicate your WHY to the whole farm team.
2. Benchmark your starting point (soil, pasture, animal, financial etc) and have a few measurables to track your progress.
3. Visit lots of other farmers to learn and gain confidence.
4. Use safe-to-fail trials to test new ideas & make changes gradually.
5. Plan, implement, observe, re-plan...
6. Be an objective observer - don't get trapped by seeing what you want to see.
7. Observe with all of your senses - interpret your observations and adapt your management.
8. Carefully monitor stock performance and behaviour when introducing new management - allow them time to adapt.
9. Trust your gut - if it doesn't feel right it probably isn't.
10. Keep learning.
